

Mini Market Stock Management System

Agreed Stack: Laravel 12 + React + Inertia.js + PostgreSQL + Tailwind CSS.

Project Goal

Build a professional stock management application for a mini market with reusable architecture for future ERP projects.

Main Modules

- Authentication & Roles
- Dashboard
- Categories
- Suppliers
- Products
- Purchases
- Sales (POS)
- Stock
- Stock Movements
- Reports
- Settings
- Users

Database

users, roles, categories, suppliers, products, purchases, purchase_items, sales, sale_items, stock_movements, settings

Architecture

Use Services (PurchaseService, SaleService, StockService), Form Requests, Policies, Eloquent relationships, transactions, reusable React components, Git, clean controllers.

Roadmap

- 1. Project setup (Laravel, React, Inertia, PostgreSQL, Tailwind, Git)
- 2. Database design and migrations
- 3. Authentication & roles
- 4. Categories CRUD
- 5. Suppliers CRUD
- 6. Products CRUD
- 7. Purchases module
- 8. Sales/POS module
- 9. Stock movements
- 10. Dashboard
- 11. Reports
- 12. Testing & polishing

Milestones

Milestone 1: Auth & Dashboard

Milestone 2: Categories & Suppliers

Milestone 3: Products

Milestone 4: Purchases

Milestone 5: Sales

Milestone 6: Stock History

Milestone 7: Reports

Milestone 8: Permissions & Final Testing

Long-term Vision

Design this as the foundation of an ERP so that most modules can be reused for pharmacies, restaurants, clothing stores, and other businesses.
